

Manage remote digital signs from anywhere.

BrightSign Network Manager makes delivering remote content to one or one hundred units a breeze. This all-inclusive networking solution uses a secure, Web-based application that provides tools to create presentations, schedule updates, manage multiple groups of displays and review real-time reports from anywhere you can connect to the Internet. It offers high security and fail-safe features to ensure that controllers stay up and running even under the worst circumstances. BrightSign Network Manager is free if you host it and very affordable if we do.

Benefits

- Connects a few or many BrightSign units using a simple Internet connection
- Delivers content updates to remote digital signs using a secure online Web-based application
- Creates full-screen and multi-zone presentations
- Manages your content and network with ease
